Amendments to the Claims

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims

5 Claim 1. (Previously presented) A filter
underdrain assembly for controlling backwash water flow in a
filtration system having a backwash water inlet, said filter
underdrain assembly comprising a plurality of panel members
forming a grid like underdrain, each panel member having a
10 plurality of apertures, the cross-sectional area of said
apertures in said panel members varying between said panel
members, said apertures of said panel members being located
further away from said backwash water inlet of said
filtration system having a lesser cross-sectional area
15 relative to said cross-sectional area of said apertures of
said panel members closer to said backwash water inlet of
said filtration system.

 Claim 2. (Previously presented) A filter
underdrain assembly as in claim 1 wherein said apertures in
20 said panel members are elongate slots.

 Claim 3. (Previously presented) A filter
underdrain assembly as in claim 2 and further comprising an
air passageway in said panel members.

25 Claim 4. (Previously presented) A filter
underdrain assembly as in claim 3 wherein said panel member
has upper and lower surfaces, said air passageway releasing
air below said upper surface of said panel member.

30 Claim 5. (Currently amended) A filter underdrain
assembly as in claim [[4]] 3 wherein said air passageway
releases air above said upper surface of said panel member.

 Claim 6. (Currently amended) A filter underdrain

- 3 -

5 assembly as in claim [[4]] 3 wherein said air passageway extends below said upper surface of said panel member, said air passageway being formed from interconnected surfaces defining sides and a bottom, said sides having perforations to allow air to escape from said air passageway below said upper surface of said panel member.

10 Claim 7. (Currently amended) A filter underdrain assembly as in claim [[4]] 3 wherein said air passageway extends below said upper surface of said panel member, said air passageway being formed from interconnected surfaces defining sides and a bottom, said air passageway having perforations extending through said upper surface of said panel member.

plurality of panel members assembled adjacent each other to form a grid like underdrain, each panel member having multiple punched bridges in a surface thereof, each bridge defining a pair of slotted water inlet/outlets and wherein the number and/or size of said punched bridges are varied from panel member to panel member, said panel members furthest away from said backwash water inlet of said filtration system having a lesser number of bridges or smaller slotted inlet/outlets from said panel members nearer to said backwash water inlet of said filtration system, said panel members being operable to provide a substantially equalized water flow through the underdrain assembly from said panel members.

Claim 19. (Previously presented) Apparatus according to claim 18 wherein said multiple punched bridges are sized to substantially prevent the passage of filter media therethrough.

Claim 20. (Previously presented) Apparatus according to claim 19 and further comprising an attachment for attaching each of said panel members to adjacent panel members for securing said panel member to said underdrain assembly.

Claim 21. (Previously presented) Apparatus according to claim 20 and further comprising a seal for forming a substantially watertight seal between a surface of each of said panel members and said underdrain.

underdrain assembly for controlling backwash water flow from a backwash water inlet associated with a filtration system, said filter underdrain assembly comprising a plurality of panel members forming a grid like underdrain, each panel member having a plurality of bridges, the number or cross-sectional area of said bridges varying between said panel members, said panel members located further away from said backwash water inlet of said filtration system having a lesser number or smaller cross-sectional area of said bridges relative to those of said panel members located closer to said backwash water inlet of said filtration system, said panel members being operable to substantially equalize water flow from each of said panel members of said filter underdrain assembly.
